British design studio [Vitruvius Yachts](#) has revealed a new superyacht concept known as the Vitruvius Palm Beach. The 46-metre project is available for sale with [Worth Avenue Yachts](#) and has been tailored specifically for the North American market.

Several prominent shipyards are "currently bidding to bring this vision to life," according to the broker, with construction expected to begin next year.

The yacht has a 8.9 metre beam

The superyacht is designed with a low draft of two metres, making it best suited to shoal draft locations such as the Bahamas, Florida and The Chesapeake.

Accommodation is across five lower deck cabins, plus quarters for nine crew. The owner's cabin would be full-beam and features an office, dressing area, his and hers bathrooms and fold-down balcony.

While the interior designer is unconfirmed, preliminary renderings reveal a pared back, contemporary aesthetic. The main saloon benefits from full-height windows, a "convertible" lounging and dining area for 10 guests as well as a dedicated lounge starboard.

The main deck is fitted with a formal bar and second convertible seating area aft. Another major convivial space is the sundeck, which has a large sunbathing area, a bar, barbecue and a Jacuzzi.

Meanwhile, the beach club features a pool that can operate with freshwater or saltwater. Bulwarks open either side to form a larger lounging area, which is arranged with several sunpads.

The concept also includes a tender garage able to accommodate a six-metre and two jet skis, thanks to a Solas-compliant sliding beam crane and fold-up shell door for launching and loading.

Vitruvius Palm Beach would be powered by twin CAT 32 engines for a maximum speed of 15.7 knots and a cruising speed of 12 knots.

This reveal follows the delivery of Vitruvius Yachts' 65.7-metre [Alchemy](#).
